THE NEW CENTURY SERIES®

Electric Wire Rope Hoists

Issued 06-01-12

Monorail Hoist Features & Benefits

1 TO 5 TON

Wright family of *SPEEDWAY* hoists is a complete line of electric wire rope hoists. It is an advanced design incorporating the most recent materials and concept. The most current duty cycle and safety requirements of users are built into this line, not added on.

CONSTRUCTION FEATURES:

CONTROLS: Choose from single, 2-speed, or inverter. Controls are magnetic reversing type, mechanically and electrically interlocked with 115 volt control circuit. All wiring conforms to applicable NEC requirements. Motor thermostats are standard providing motor running overcurrent protection. NEMA Type 3R enclosures are standard. Cover is lightweight, tough ABS material, deep-drawn for maximum control accessibility.

PUSH BUTTON STATION: Push button stations are not furnished as standard equipment with these hoists. Push button station drop of cord & strain chain are available as optional equipment. See Accessories Section. Specify required drop.

MOTOR: Standard NEMA C face mounting, TENV, Class F insulation, 30-minute duty motor is provided for standard commercial power supplies. The motor has a standard NEMA shaft extension.

GEAR TRAIN: Quiet, helical and spur gearing. All gears are machine cut, case-hardened alloy steel with shock-resistant ductile cores. Gearing is designed to AGMA standards for maximum life, and operates in an oil bath. Rugged aluminum alloy housing provides rapid heat dissipation.

BEARINGS - SPIDER RETAINER: Precision heavy-duty ball bearings support all shafts. Bearings at outboard end of shafts are held in place by a heavy-duty Spider Retainer. This allows removal of Gear Housing Cover for inspection (after draining oil). All internal parts remain in place and can be operated for inspection.

DRUM: The large diameter steel drum has machined grooves and large flanges. At least two full turns of rope remain on the drum at the lowest hook position of rated lift.

LOAD BLOCK- HOOK: Drop forged heat-treated steel hook swivels 360° on a shielded roller thrust bearing and comes equipped with a spring latch. Work can be performed on the load block without removing wire rope from drum. Sheaves are machined steel.

WIRE ROPE: Pre-formed wire rope, of hoisting service construction, has swaged fittings on both ends for ease of replacement if necessary.

MECHANICAL LOAD BRAKE: Automatic Weston-type multiple disc brake. It can hold a full capacity load independent of motor brake and assures that the load does not accelerate while being lowered. Adjustment is not required.

MOTOR BRAKE: Proven in millions of hours of in-service operation, the original *Wright* A-C magnet-actuated disc brake delivers rapid stops with virtually no hook drift. Rated a minimum of 150% of full load motor torque.

LIMIT SWITCH: A gravity-type upper hook travel limit switch is provided. The unit is equipped with an automatic momentary lowering circuit. An optional geared limit switch is also available.

TROLLEY FRAME: The trolley frame shall be built of steel and precision machined to assure proper alignment of trolley wheels and drives.

TROLLEY WHEELS: 1 to 2 ton trolley wheels are heat treated gray iron. Each wheel supported on anti-friction bearings suitable to take radial and thrust loads. The trolley wheels have crowned treads for operation on tapered or flat flange beams. The wheels shall be lubricated at the factory with sodium base grease.

TROLLEY WHEELS: 3 and 5 ton trolley wheels shall have tread surfaces machined and hardened to 375-425 Brinell. Each wheel shall be supported on anti-friction bearings suitable to take radial and thrust loads. The wheels shall be lubricated at the factory with sodium base grease. The trolley wheels have dual tread for operation on tapered or flat flange beams. Wheel treads shall be smooth, true and uniform within .010 inch tread diameter on all wheels.

TROLLEY DRIVE: The trolley drive shall be a right angle worm gear reducer fully enclosed with a steel worm and bronze worm wheel designed to AGMA standards. The final gear reduction at trolley wheels will be spur gears and will be open. The trolley drive motor shall be TENV 30 minute duty with class F insulation and NEMA C face mounting. A spring set A.C. disc type brake is available as optional equipment.

TROLLEY CONTROLS: Choose from single, 2-speed, or inverter. Single and 2-speed controls are available with ACM solid state cushion start for smooth travel motion and excellent load control as optional equipment.

OPTIONAL OVERLOAD CUTOFF: Protects load, hoist and operator by interrupting raising circuit when hoist senses a damaging overload. When lifting circuit is interrupted, the lowering circuit remains intact to allow the load to be lowered and removed. After the overload is removed the lifting circuit is automatically restored. Overload Cutoff is accessible for field adjustments.

800-967-7333 www.accomhs.com

Equipment described herein is not designed for, and should not be used for, lifting, supporting, or transporting humans. Modifications to upgrade, rerate, or otherwise alter the hoist or crane equipment shall be authorized only by the original manufacturer or qualified professional engineer. Failure to comply with any one of the limitations noted herein may result in serious bodily injury.

Monorail Hoist Features & Benefits

1 TO 5 TON

THE NEW CENTURY SERIES®

Electric Wire Rope Hoists

Issued 06-01-12

HOW TO SPECIFY A *SPEEDWAY* HOIST

1. DETERMINE THE CAPACITY, LIFTING SPEED AND LIFTING DISTANCE.

2. DETERMINE THE REEVING REQUIRED FOR YOUR APPLICATION. *SPEEDWAY* hoists may be reeved in various ways to gain desired mechanical advantages ... capacity, lifting distance, and lifting speeds.

Reeving terminology is either "single" or "double" which refers to the number of wire ropes coming from the drum.

Another word is "part" which refers to the mechanical advantage gained by multiple reeving. For example, with 2 part single reeving (2 PS) the load is distributed over the two parts and the mechanical advantage doubles the capacity of one part reeving and reduces by one half the lifting or lowering speed of the hook.

Reeving changes hoist arrangement to the beam or track, minimum headroom distance, and lateral hook travel.

Some applications require that the load, when being lifted, not move right or left from hoist centerline. If this requirement is known, a true vertical lift hoist must be used. These are described as double reeved.

3. SPECIFY PROPER MODEL NUMBER in regard to hoist. Capacity, lifting speed, mounting and hoist control found in the following pages.

4. SPECIFY MOTOR VOLTAGE: *Wright* standard motors are available in 200/230/460/575-3-60 power with Class F insulation, and are totally enclosed non-ventilated. Control is furnished as standard equipment. Additional motor and control accessories are found in the Accessories Section.

5. SPECIFY BEAM FLANGE WIDTH: *SPEEDWAY* trolleys are adjustable for Standard I beam or WF beam, 4 inch to 11 inch flange width. *Beam size must be specified.* Trolleys are also available for 3.25 or 3.33" patented track beams. Trolleys for WF beams with flange widths greater than 11 inches available. See Accessories. All reference to beam flange widths are for clearance purposes only and do not imply that lower flange of beam will support hoist with load.

6. SPECIFY OTHER MODIFICATIONS AND ACCESSORIES.

7. SPECIAL APPLICATION HOISTS: Contact your nearest *Wright* representative.

8. FOR CURVED TRACK APPLICATION, CONTACT FACTORY.

9. ACCO RESERVES THE RIGHT TO MAKE CHANGES TO THIS CATALOG AS MAY BE DEEMED NECESSARY.

THE NEW CENTURY SERIES®

Electric Wire Rope Hoists

Issued 06-01-12

Monorail Hoist
CLOSE HEADROOM CROSS MOUNTED

1 TO 5 TON

Features & Benefits

Wright family of *SPEEDWAY* hoists is a complete line of electric wire rope hoists. It is an advanced design incorporating the most recent materials and concept. The most current duty cycle and safety requirements of users are built into this line, not added on.

CONSTRUCTION FEATURES:

CONTROLS: Choose from single, 2-speed, or inverter. Controls are magnetic reversing type, mechanically and electrically interlocked with 115 volt control circuit. All wiring conforms to applicable NEC requirements. Motor thermostats are standard providing motor running overcurrent protection. NEMA Type 3R enclosures are standard. Cover is lightweight, tough ABS material, deep-drawn for maximum control accessibility.

PUSH BUTTON STATION: Push button stations are not furnished as standard equipment with these hoists. Push button station drop of cord & strain chain are available as optional equipment. See Accessories Section. Specify required drop.

MOTOR: Standard NEMA C face mounting, TENV, Class F insulation, 30-minute duty motor is provided for standard commercial power supplies. The motor has a standard NEMA shaft extension.

GEAR TRAIN: Quiet, helical and spur gearing. All gears are machine cut, case-hardened alloy steel with shock-resistant ductile cores. Gearing is designed to AGMA standards for maximum life, and operates in an oil bath. Rugged aluminum alloy housing provides rapid heat dissipation.

BEARINGS - SPIDER RETAINER: Precision heavy-duty ball bearings support all shafts. Bearings at outboard end of shafts are held in place by a heavy-duty Spider Retainer. This allows removal of Gear Housing Cover for inspection (after draining oil). All internal parts remain in place and can be operated for inspection.

DRUM: The large diameter steel drum has machined grooves and large flanges. At least two full turns of rope remain on the drum at the lowest hook position of rated lift. .

LOAD BLOCK- HOOK: Drop forged heat-treated steel hook swivels 360° on a shielded roller thrust bearing and comes equipped with a spring latch. Work can be performed on the load block without removing wire rope from drum. Sheaves are machined steel.

WIRE ROPE: Pre-formed wire rope, of hoisting service construction, has swaged fittings on both ends for ease of replacement if necessary.

MECHANICAL LOAD BRAKE: Automatic Weston-type multiple disc brake. It can hold a full capacity load independent of motor brake and assures that the load does not accelerate while being lowered. Adjustment is not required.

MOTOR BRAKE: Proven in millions of hours of in-service operation, the original *Wright* A-C magnet-actuated disc brake delivers rapid stops with virtually no hook drift. Rated a minimum of 150% of full load motor torque.

LIMIT SWITCH: A gravity-type upper hook travel limit switch is provided. The unit is equipped with an automatic momentary lowering circuit. An optional geared limit switch is also available.

TROLLEY FRAME: The trolley frame shall be built of steel and precision machined to assure proper alignment of trolley wheels and drives.

TROLLEY WHEELS: 1 and 2 ton trolley wheels are heat treated gray iron. Each wheel supported on anti-friction bearings suitable to take radial and thrust loads. The trolley wheels have crowned treads for operation on tapered or flat flange beams. The wheels shall be lubricated at the factory with sodium base grease.

TROLLEY WHEELS: 3 to 5 ton trolley wheels shall have tread surfaces machined and hardened to 375-425 Brinell. Each wheel shall be supported on anti-friction bearings suitable to take radial and thrust loads. The wheels shall be lubricated at the factory with sodium base grease. The trolley wheels have dual tread for operation on tapered or flat flange beams. Wheel treads shall be smooth, true and uniform within .010 inch tread diameter on all wheels.

TROLLEY DRIVE: The trolley drive shall be a right angle worm gear reducer fully enclosed with a steel worm and bronze worm wheel designed to AGMA standards. The final gear reduction at trolley wheels will be spur gears and will be open. The trolley drive motor shall be TENV 30 minute duty with class F insulation and NEMA C face mounting. A spring set A.C. disc type brake is available as optional equipment.

TROLLEY CONTROLS: Choose from single, 2-speed, or inverter. Single and 2-speed controls are available with ACM solid state cushion start for smooth travel motion and excellent load control as optional equipment.

OPTIONAL OVERLOAD CUTOFF:

Protects load, hoist and operator by interrupting raising circuit when hoist senses a damaging overload. When lifting circuit is interrupted, the lowering circuit remains intact to allow the load to be lowered and removed. After the overload is removed the lifting circuit is automatically restored. Overload Cutoff is accessible for field adjustments.

Features & Benefits

HOW TO SPECIFY A *SPEEDWAY* HOIST

1. DETERMINE THE CAPACITY, LIFTING SPEED AND LIFTING DISTANCE.

2. DETERMINE THE REEVING REQUIRED FOR YOUR APPLICATION. *SPEEDWAY* hoists may be reeved in various ways to gain desired mechanical advantages ... capacity, lifting distance, and lifting speeds.

3. SPECIFY PROPER MODEL NUMBER in regard to hoist. Capacity, lifting speed, mounting and hoist control found in the following pages.

4. SPECIFY MOTOR VOLTAGE: *Wright* standard motors are available in 200/230/460/575-3-60 power with Class F insulation, and are totally enclosed non-ventilated. Control is furnished as standard equipment. Additional motor and control accessories are found in the Accessories Section.

5. SPECIFY BEAM FLANGE WIDTH: *SPEEDWAY* trolleys are adjustable for Standard I beam or WF beam, 4 inch to 11 inch flange width. *Beam size must be specified.* Trolleys are also available for 3.25 or 3.33" patented track beams. Trolleys for WF beams with flange widths greater than 11 inches available. See Accessories. All reference to beam flange widths are for clearance purposes only and do not imply that lower flange of beam will support hoist with load.

6. SPECIFY OTHER MODIFICATIONS AND ACCESSORIES.

7. SPECIAL APPLICATION HOISTS: Contact your nearest *Wright* representative.

8. FOR CURVED TRACK APPLICATION, CONTACT FACTORY.

9. ACCO RESERVES THE RIGHT TO MAKE CHANGES TO THIS CATALOG AS MAY BE DEEMED NECESSARY.

ACCO Acco Material Handling Solutions 800-967-7333 www.accomhs.com

WARNING

*To complete Model Number insert L, P or M in place of asterisk.

All dimensions shown in inches unless otherwise specified. Dimensions which change with beam size are for minimum beam shown.

Speedway trolleys are adjustable for Standard I beam or WF beam, 4 inch to 11 inch flange width. Beam size must be specified. Trolleys are also available for 3.25 or 3.33" patented track beams. See **Accessories Section** for applications with flange width exceeding 11 inches.

All reference to beam flange widths are for clearance purposes only and do not imply that lower flange of beam will support hoist with load.

TROLLEY DATA:	Speed	50 FPM	100 FPM
	HP	1/2	1/2

All two speed trolley motors are 1800/600 RPM

(a) Trolley Brake is available as optional equipment.

(b) Dimension to bottom of control box increases from 16-9/16" to 22-9/16" with any of the following:

Single speed hoist and two speed trolley with ACM

Two speed hoist and single speed trolley with ACM

Two speed hoist and two speed trolley with ACM

Two speed hoist greater than 2 horsepower and two speed trolley without ACM

THE NEW CENTURY SERIES®

Electric Wire Rope Hoists

Issued 06-01-12

Top Running Trolley Hoists Features & Benefits

1 TO 5 TON

Wright family of *SPEEDWAY* hoists is a complete line of electric wire rope hoists. It is an advanced design incorporating the most recent materials and concept. The most current duty cycle and safety requirements of users are built into this line, not added on.

CONSTRUCTION FEATURES:

CONTROLS: Choose from single, 2-speed, or inverter. Controls are magnetic reversing type, mechanically and electrically interlocked with 115 volt control circuit. All wiring conforms to applicable NEC requirements. Motor thermostats are standard providing motor running overcurrent protection. NEMA Type 3R enclosures are standard. Cover is lightweight, tough ABS material, deep-drawn for maximum control accessibility.

PUSH BUTTON STATION: Push button stations are not furnished as standard equipment with these hoists. Push button station drop of cord & strain chain are available as optional equipment. See Accessories Section. Specify required drop.

MOTOR: Standard NEMA C face mounting, TENV, Class F insulation, 30-minute duty motor is provided for standard commercial power supplies. The motor has a standard NEMA shaft extension.

GEAR TRAIN: Quiet, helical and spur gearing. All gears are machine cut, case-hardened alloy steel with shock-resistant ductile cores. Gearing is designed to AGMA standards for maximum life, and operates in an oil bath. Rugged aluminum alloy housing provides rapid heat dissipation.

BEARINGS - SPIDER RETAINER: Precision heavy-duty ball bearings support all shafts. Bearings at outboard end of shafts are held in place by a heavy-duty Spider Retainer. This allows removal of Gear Housing Cover for inspection (after draining oil). All internal parts remain in place and can be operated for inspection.

DRUM: The large diameter steel drum has machined grooves and large flanges. At least two full turns of rope remain on the drum at the lowest hook position of rated lift. .

LOAD BLOCK- HOOK: Drop forged heat-treated steel hook swivels 360° on a shielded roller thrust bearing and comes equipped with a spring latch. Work can be performed on the load block without removing wire rope from drum. Sheaves are machined steel.

WIRE ROPE: Pre-formed wire rope, of hoisting service construction, has swaged fittings on both ends for ease of replacement if necessary.

MECHANICAL LOAD BRAKE: Automatic Weston-type multiple disc brake. It can hold a full capacity load independent of motor brake and assures that the load does not accelerate while being lowered. Adjustment is not required.

MOTOR BRAKE: Proven in millions of hours of in-service operation, the original *Wright* A-C magnet-actuated disc brake delivers rapid stops with virtually no hook drift. Rated a minimum of 150% of full load motor torque.

LIMIT SWITCH: A gravity-type upper hook travel limit switch is provided. The unit is equipped with an automatic momentary lowering circuit. An optional geared limit switch is also available.

TROLLEY FRAME: The trolley frame shall be built of steel and precision machined to assure proper alignment of trolley wheels and drives.

TROLLEY WHEELS: Trolley wheels shall have tread surfaces machined and hardened to 375-425 Brinell. Each wheel shall be supported on ball bearings suitable to take radial and thrust loads. The wheels shall be lubricated at the factory with sodium base grease. Wheel treads shall be smooth, true and uniform within .010 inch tread diameter on all wheels.

TROLLEY DRIVE: The trolley drive shall be a right angle worm gear reducer fully enclosed with a steel worm and bronze worm wheel designed to AGMA standards. The final gear reduction at trolley wheels will be spur gears and will be open. The trolley drive motor shall be TENV 30 minute duty with class F insulation and NEMA C face mounting. A spring set A.C. disc type brake is available as optional equipment.

TROLLEY CONTROLS: Choose from single, 2-speed, or inverter. Single and 2-speed controls are available with ACM solid state cushion start for smooth travel motion and excellent load control as optional equipment.

OPTIONAL OVERLOAD CUTOFF:

Protects load, hoist and operator by interrupting raising circuit when hoist senses a damaging overload. When lifting circuit is interrupted, the lowering circuit remains intact to allow the load to be lowered and removed. After the overload is removed the lifting circuit is automatically restored. Overload Cutoff is accessible for field adjustments.

800-967-7333 www.accomhs.com

Equipment described herein is not designed for, and should not be used for, lifting, supporting, or transporting humans. Modifications to upgrade, rerate, or otherwise alter the hoist or crane equipment shall be authorized only by the original manufacturer or qualified professional engineer. Failure to comply with any one of the limitations noted herein may result in serious bodily injury.

WRIGHT® SPEEDWAY®

THE NEW CENTURY SERIES®

Electric Wire Rope Hoists

Issued 06-01-12

Top Running Trolley Hoists Features & Benefits

1 TO 5 TON

HOW TO SPECIFY A SPEEDWAY TROLLEY HOIST

1. DETERMINE THE CAPACITY, LIFTING SPEED, AND LIFTING DISTANCE.

2. DETERMINE THE REEVING REQUIRED FOR YOUR APPLICATION. *SPEEDWAY* hoists may be reeved in various ways to gain desired mechanical advantages ... capacity, lifting distance, and lifting speeds.

Hoist reeving may be either single or double reeving. The rated load of the hoist is determined in part by the number of parts (lines) of rope. The hoist speed is determined by the rotational speed of the drum and the reeving of the hoist.

	Single Reeved	Double Reeved
Reeving:	2 PS or 4 PS	2 PD or 4 PD
Minimum Headroom:	Fair	Good
Lateral Hook Travel:	Hook travels	None
Cost:	Lower	Higher

HEADROOM: Some applications require that the distance from the top of bridge rail to saddle of the hook be held to a minimum. This dimension will determine whether a single reeved or double reeved model is required.

HOOK TRAVEL:

Some applications require that the load, when being lifted, not move right or left from hoist centerline. If this requirement is known, a true vertical lift hoist must be used. These are described as two part double (2 PD) or four part double (4 PD).

3. **SPECIFY PROPER MODEL NUMBER** in regard to hoist. Capacity, lifting speed, mounting and hoist control found in the following pages.

4. **SPECIFY MOTOR VOLTAGE:** ACCO standard motors are available in 200/230/460/575-3-60 power with Class F insulation, and are totally enclosed non-ventilated. Control is furnished as standard equipment. Additional motor and control accessories are found in the Accessories Section.

5. **WHEEL GAGE:** Top running trolley hoists are available in various wheel gages depending on lift of the hoist. The wheel gage (WG) of top running hoist determines rail spacing. Special wheel gages for existing crane applications are available upon request.

6. **SPECIAL APPLICATION HOISTS:** Contact your nearest *Wright* representative.

7. **ACCO RESERVES THE RIGHT TO MAKE CHANGES TO THIS CATALOG AS MAY BE DEEMED NECESSARY.**

Deck Mounted Features & Benefits

1 TO 5 TON

Electric Wire Rope Hoists

Issued 06-01-12

Wright family of *SPEEDWAY* hoists is a complete line of electric wire rope hoists. It is an advanced design incorporating the most recent materials and concept. The most current duty cycle and safety requirements of users are built into this line, not added on.

CONSTRUCTION FEATURES:

The new style of deck mounted *SPEEDWAY* hoist has been designed to allow for easy mounting of the hoist to a double beam trolley frame.

CONTROLS: Choose from single, 2-speed, or inverter. Controls are magnetic reversing type, mechanically and electrically interlocked with 115 volt control circuit. All wiring conforms to applicable NEC requirements. Motor thermostats are standard providing motor running overcurrent protection. NEMA Type 3R enclosures are standard. Cover is lightweight, tough ABS material, deep-drawn for maximum control accessibility. Controls are shipped loose for customer mounting.

PUSH BUTTON STATION: Push button stations are not furnished as standard equipment with these hoists. Push button station drop of cord & strain chain are available as optional equipment. See Accessories Section. Specify required drop.

MOTOR: Standard NEMA C face mounting, TENV, Class F insulation, 30-minute duty motor is provided for standard commercial power supplies. The motor has a standard NEMA shaft extension.

GEAR TRAIN: Quiet, helical and spur gearing. All gears are machine cut, case-hardened alloy steel with shock-resistant ductile cores. Gearing is designed to AGMA standards for maximum life, and operates in an oil bath. Rugged aluminum alloy housing provides rapid heat dissipation.

BEARINGS - SPIDER RETAINER: Precision heavy-duty ball bearings support all shafts. Bearings at outboard end of shafts are held in place by a heavy-duty Spider Retainer. This allows removal of Gear Housing Cover for inspection (after draining oil). All internal parts remain in place and can be operated for inspection.

DRUM: The large diameter steel drum has machined grooves and large flanges. At least two full turns of rope remain on the drum at the lowest hook position of rated lift.

LOAD BLOCK - HOOK: Drop forged heat-treated steel hook swivels 360° on a shielded roller thrust bearing and comes equipped with a spring latch. Work can be performed on the load block without removing wire rope from drum. Sheaves are machined steel.

WIRE ROPE: Pre-formed wire rope, of hoisting service construction, has swaged fittings on both ends for ease of replacement if necessary.

MECHANICAL LOAD BRAKE: Automatic Weston-type multiple disc brake. It can hold a full capacity load independent of the motor brake and assures that the load does not accelerate while being lowered. Adjustment is not required.

MOTOR BRAKE: Proven in millions of hours of in-service operation, the original *Wright* A-C magnet-actuated disc brake delivers rapid stops with virtually no hook drift. Rated a minimum of 150% of full load motor torque.

LIMIT SWITCH: A gravity-type upper hook travel limit switch is provided. The unit is equipped with an automatic momentary lowering circuit. An optional geared limit switch is also available.

OPTIONAL OVERLOAD CUTOFF: Protects load, hoist and operator by interrupting raising circuit when hoist senses a damaging overload. When lifting circuit is interrupted, the lowering circuit remains intact to allow the load to be lowered and removed. After the overload is removed the lifting circuit is automatically restored. Overload Cutoff is accessible for field adjustments.

THE NEW CENTURY SERIES®

Electric Wire Rope Hoists

Issued 06-01-12

HOW TO SPECIFY A SPEEDWAY DECK MOUNTED HOISTS

1. DETERMINE THE CAPACITY, LIFTING SPEED, AND LIFTING DISTANCE.

2. DETERMINE THE REEVING REQUIRED FOR YOUR APPLICATION. *SPEEDWAY* hoists may be reeved in various ways to gain desired mechanical advantages... capacity, lifting distance, and lifting speeds.

Reeving terminology is either "single" or "double" which refers to the number of wire ropes coming from the drum.

Another word is "part" which refers to the mechanical advantage gained by multiple reeving. For example, with 2 part single reeving (2 PS) the load is distributed over the two parts and the mechanical advantage doubles the capacity of one part reeving and reduces by one half the lifting or lowering speed of the hook.

Reeving changes hoist arrangement to the beam or track, minimum headroom distance, and lateral hook travel.

Some applications require that the load, when being lifted, not move right or left from hoist centerline. If this requirement is known, a true vertical lift hoist must be used. These are described as double reeved.

3. SPECIFY PROPER MODEL NUMBER in regard to hoist.

Capacity, lifting speed, mounting and hoist control found in the following pages.

4. SPECIFY MOTOR VOLTAGE: *Wright* standard motors are available in 200/230/460/575-3-60 power with Class F insulation, and are totally enclosed non-ventilated. Control is furnished as standard equipment. Additional motor and control accessories are found in the Accessories Section.

5. SPECIFY OTHER MODIFICATIONS AND ACCESSORIES.

6. SPECIAL APPLICATION HOISTS: Contact your nearest *Wright* representative.

7. ACCO RESERVES THE RIGHT TO MAKE CHANGES TO THIS CATALOG AS MAY BE DEEMED NECESSARY

WRIGHT®
SPEEDWAY®

THE NEW CENTURY SERIES®

Electric Wire Rope Hoists

Issued 06-01-12

Base Mounted Winch Features & Benefits

1/2 TO 1-1/2 TON

Wright family of *SPEEDWAY* winches is a complete line of electric wire rope hoists. It is an advanced design incorporating the most recent materials and concept. The most current duty cycle and safety requirements of users are built into this line, not added on.

CONSTRUCTION FEATURES:

CONTROLS: Choose from single, 2-speed, or inverter. Controls are magnetic reversing type, mechanically and electrically interlocked with 115 volt control circuit. All wiring conforms to applicable NEC requirements. Motor thermostats are standard providing motor running overcurrent protection. NEMA Type 3R enclosures are standard. Cover is lightweight, tough ABS material, deep-drawn for maximum control accessibility. Controls are shipped loose for customer mounting.

MOTOR: Standard NEMA C face mounting, TENV, Class F insulation, 30-minute duty motor is provided for standard commercial power supplies. The motor has a standard NEMA shaft extension.

GEAR TRAIN: Quiet, helical and spur gearing. All gears are machine cut, case-hardened alloy steel with shock-resistant ductile cores. Gearing is designed to AGMA standards for maximum life, and operates in an oil bath. Rugged aluminum alloy housing provides rapid heat dissipation.

BEARINGS - SPIDER RETAINER: Precision heavy-duty ball bearings support all shafts. Bearings at outboard end of shafts are held in place by a heavy-duty Spider Retainer. This allows removal of Gear Housing Cover for inspection (after draining oil). All internal parts remain in place and can be operated for inspection.

DRUM: The large diameter steel drum has machined grooves and large flanges. At least two full turns of rope remain on the drum at rated drum winding capacity. Load capacity of each winch is rated a total line pull of the lead wire rope off the winch's drum. A single line winch has one lead of wire rope off the drum rated at full capacity. A double line winch has two leads of wire rope off hoist drum with a capacity of one half hoist rated capacity.

MECHANICAL LOAD BRAKE: Automatic Weston-type multiple disc brake. It can hold a full capacity load independent of the motor brake and assures that load does not accelerate while being lowered. Adjustment is not required.

MOTOR BRAKE: Proven in millions of hours of in-service operation, the original *Wright A-C* magnet-actuated disc brake delivers rapid stops with virtually no hook drift. Rated a minimum of 150% of full load motor torque.

OVERLOAD CUTOFF: Exclusive patented Wright unit is not available on winches.

HOW TO SPECIFY A SPEEDWAY WINCH

1. DETERMINE THE CAPACITY, NUMBER OF LINES, LIFTING SPEED, AND WIRE ROPE LEAD OFF POSITION FOR YOUR APPLICATION. *SPEEDWAY* winches may be reeved in various ways to gain desired mechanical advantages. The chart in paragraph 4 illustrates characteristics of each type of reeving.

Reeving may change capacity, lifting distances, lifting speeds, and cable size.

Reeving terminology is either "single" or "double" which refers to the number of wire ropes coming from the drum.

Another word is "part" which refers to the mechanical advantage gained by multiple reeving. For example, with one part single reeving (1 PS), the load is supported by one part of a single rope. By reeving single rope into two parts (2 part single) the load is distributed over the two parts and the mechanical advantage doubles the capacity of one part reeving and reduces by one half the lifting or lowering speed of the hook.

2. SPECIFY PROPER MODEL NUMBER in regards to winch capacity, drum winding capacity, lifting speed and hoist control found in following pages. Winches are grouped by load capacity. All winches are one part single reeved (1 PS) in either single or double line models.

3. SPECIFY EITHER SINGLE LINE OR DOUBLE LINE MODEL.

4. SPECIFY DRUM REEVING ARRANGEMENTS.

SINGLE LINE REEVING ARRANGEMENTS

DOUBLE LINE REEVING ARRANGEMENTS

Standard Arrangement

CC Arrangement

DD Arrangement

EE Arrangement

Base Mounted Winch Features & Benefits

1/2 TO 1-1/2 TON

THE NEW CENTURY SERIES®

Electric Wire Rope Hoists

Issued 06-01-12

5. DETERMINE IF STANDARD LINE LEADOFF ANGLE IS APPROPRIATE. *SPEEDWAY* winches are designed with a standard range or ranges of leadoff angles. See the illustration below for location of the standard range.

If any of desired leadoff angle falls into non standard area, the factory must be consulted for fabrication and additional pricing factors, Specify the desired angle range viewed from the gearing end of winch. State angle in EXACT degree clockwise from zero vertical leadoff position as shown. If a range of degrees is required, state both limits in degrees.

6. SPECIFY THE WIRE ROPE.

SPEEDWAY winches are not furnished with wire rope but are available with wire rope as optional equipment. Wire rope on all winches is 6 x 37 preformed. Certain applications may require non-rotating cable, 18 x 7 construction. Prices for non-rotating cable are available on application. Specify the wire rope by total length, diameter, and desired fittings.

7. SPECIFY CABLE FITTINGS. The drum end (live end) cable fitting is attached to wire rope when supplied from the factory. The cable fitting is designed for easy installation and is swaged on to provide maximum security. See Accessories Section for pricing.

The following "DEAD END" cable fittings are available on application:

- Eye Bolt
- Turn Buckle
- Threaded Rod
- Swivel Hook

The "DEAD END" of wire rope may be specified "OPEN" (no fittings) or with any of the above fittings.

8. SPECIFY LOAD BLOCK AND IDLER SHEAVES. Information and data for these items are found in Accessories Section.

9. SPECIFY MOTOR VOLTAGE. *Wright* standard motors are available in 200/230/460/575-3-60 power with Class F insulation, and are totally enclosed non-ventilated.

10. CONTROL. Control is furnished as standard equipment. Additional motor and control accessories and modifications are found in Accessories Section. Control is shipped loose for customer mounting. If control mounting by ACCO is desired, contact factory for pricing. Contact factory for control dimensions and locations.

11. SPECIFY PUSH BUTTON STATION. Push button station, drop of cord and strain chain are available as optional equipment. Specify drop of push button, calculated from center line of a winch to center line of the push button, See Accessories Section.

12. SPECIFY LIMIT SWITCHES. *SPEEDWAY* winches are not furnished with a standard limit switch or an overload cutoff device. Geared limit switch is available as optional equipment. A separate gravity limit switch to be actuated by the bottom block or load hook assembly is required per ANSI / ASME B30 standards. Slack line limit switch is available on application.

13. ACCO RESERVES THE RIGHT TO MAKE CHANGES TO THIS CATALOG AS MAY BE DEEMED NECESSARY.

WRIGHT®
Work-Rated®

THE NEW CENTURY SERIES®

Electric Wire Rope Hoists

Issued 06-01-12

Monorail Hoist Features & Benefits

1 TO 25 TON

Wright family of *Work-Rated* hoists is a complete line of electric wire rope hoists. It is an advanced design incorporating the most recent materials and concept. The most current duty cycle and safety requirements of users are built into this line, not added on.

CONSTRUCTION FEATURES:

CONTROLS: Choose from single, 2-speed, or inverter. Controls are magnetic reversing type, mechanically and electrically interlocked with 115 volt control circuit. All wiring conforms to applicable NEC requirements. Motor thermostats are standard providing motor running overcurrent protection. NEMA Type 3R enclosures are standard. Cover is lightweight, tough ABS material, deep-drawn for maximum control accessibility.

PUSH BUTTON STATION: Push button stations are not furnished as standard equipment with these hoists. Push button station drop of cord & strain chain are available as optional equipment. See Accessories Section. Specify required drop.

MOTOR: Standard NEMA C face mounting, TENV, Class F insulation, 30-minute duty motor is provided for standard commercial power supplies. The motor has a standard NEMA shaft extension.

GEAR TRAIN: Quiet, helical and spur gearing. All gears are machine cut, case-hardened alloy steel with shock-resistant ductile cores. Gearing is designed to AGMA standards for maximum life, and operates in an oil bath. Rugged aluminum alloy housing provides rapid heat dissipation.

BEARINGS - SPIDER RETAINERS: Precision heavy-duty ball bearings support all shafts. All bearings are either splash lubricated, or lifetime pre-lubricated and sealed. Bearings at outboard end of shafts are held in place by heavy-duty Spider Retainers. This allows removal of Gear Housing Cover for inspection (after draining oil). All internal parts remain in place and can be operated for inspection.

DRUM: The large diameter steel drum has machined grooves and large flanges. At least two full turns of rope remain on the drum at the lowest hook position of rated lift.

LOAD BLOCK - HOOK: Drop forged heat-treated steel hook swivels 360° on a shielded roller thrust bearing and comes equipped with a spring latch. Work can be performed on the load block without removing wire rope from drum. Sheaves are machined steel.

WIRE ROPE: Pre-formed wire rope, of hoisting service construction, made of extra improved plow steel (XIP) with an independent wire rope center. Has swaged fittings on both ends for ease of replacement if necessary.

MECHANICAL LOAD BRAKE: Automatic Weston-type multiple disc brake can hold a full capacity load independent of motor brake. This brake assures that load does not accelerate while being lowered. No wear compensation adjustment is required.

MOTOR BRAKE: Proven in millions of hours of in-service operation, the original *Wright* rectified D-C magnet-actuated disc brake delivers rapid stops with virtually no hook drift. Rated a minimum of 150% of full load motor torque. Exclusive brake-sensing microswitch prevents motor from operating against engaged brake and when brake requires adjustment.

LIMIT SWITCH: A gravity-type upper hook travel limit switch is provided. The unit is equipped with an automatic momentary lowering circuit. An optional geared limit switch is also available.

OVERLOAD CUTOFF: Exclusive patented ACCO unit is standard on all *Work-Rated* hoists except single-line models. The overload limiting device shall be designed to permit operation of the hoist within its rated load and to limit the amount of overload that can be lifted by a properly maintained hoist, under normal operating conditions.

The overload limiting device may allow the lifting of an overload, but shall be designed to prevent the lifting of an overload of such magnitude that could cause damage to a hoist, trolley, or supports. This does not imply that any overload is to be intentionally applied to the hoist.

The overload limiting device is an emergency device and shall not be used to measure the maximum load to be lifted and shall not be used to sense the overload imposed by the constrained load.

TROLLEY FRAME: The trolley frame shall be built of steel and precision machined to assure proper alignment of trolley wheels and drives.

TROLLEY WHEELS: Trolley wheels shall have tread surfaces machined and hardened to 375-425 Brinell. Each wheel shall be supported on anti-friction bearings suitable to take radial and thrust loads. The wheels shall be lubricated at the factory with a sodium base grease. The trolley wheels have dual tread for operation on tapered or flat flange beams. Wheel treads shall be smooth, true and uniform within .010 inch tread diameter on all wheels.

TROLLEY DRIVE: The trolley drive shall be a right angle worm gear reducer fully enclosed with a steel worm and bronze worm wheel designed to AGMA standards. The final reduction gear reduction at trolley wheels will be spur gears and will be open. The trolley drive motor shall be TENV 30 minute duty with class F insulation and NEMA C face mounting. A spring set A.C. disc type brake is available as optional equipment.

TROLLEY CONTROLS: Choose from single, 2-speed, or inverter. Single and 2-speed control are available with ACM solid state cushion start for smooth travel motion and excellent load control as optional equipment.

HOW TO SPECIFY A *Work-Rated* HOIST

1. DETERMINE THE CAPACITY, LIFTING SPEED AND LIFTING DISTANCE.

2. DETERMINE THE REEVING REQUIRED FOR YOUR APPLICATION. *Work-Rated* hoists may be reeved in various ways to gain desired mechanical advantages ... capacity, lifting distance, and lifting speeds.

Reeving terminology is either "single" or "double" which refers to the number of wire ropes coming from the drum.

Monorail Hoist Features & Benefits

1 TO 25 TON

Another word is "part" which refers to the mechanical advantage gained by multiple reeving. For example, with 2 part single reeving (2 PS) the load is distributed over the two parts and the mechanical advantage doubles the capacity of one part reeving and reduces by one half the lifting or lowering speed of the hook.

Reeving changes hoist arrangement to the beam or track, minimum headroom distance, and lateral hook travel.

HOOK TRAVEL:

Some applications require that the load, when being lifted, not move right or left from hoist centerline. If this requirement is known, a true vertical lift hoist must be used. These are described as two part double (2 PD) or four part double (4 PD).

	Single Reeved	Double Reeved
Reeving:	2 PS or 4 PS	2 PD or 4 PD
Minimum Headroom:	Fair	Good
Lateral Hook Travel:	Hook travels	None
Cost:	Lower	Higher

HEADROOM: Some applications require that the distance from the bottom of beam to saddle of the hook be held to a minimum. This dimension will determine whether single reeved or double reeved model is required.

3. SPECIFY PROPER MODEL NUMBER in regard to hoist. Capacity, lifting speed, mounting and hoist control found in the following pages.

4. SPECIFY MOTOR VOLTAGE: *Wright* standard motors are available in 200/230/460/575-3-60 power with Class F insulation, and are totally enclosed non-ventilated. Control is furnished as standard equipment. Additional motor and control accessories are found in the Accessories Section.

5. SPECIFY BEAM FLANGE WIDTH: Work-rated trolleys are adjustable for Standard I beam or WF beam, 4 inch to 11 inch flange width. Beam size must be specified. Trolleys are also available for 3.25 or 3.33" patented track beams. Trolleys for WF beams with flange widths greater than 11 inches available. See Accessories. All reference to beam flange widths are for clearance purposes only and do not imply that lower flange of beam will support hoist with load.

6. SPECIFY OTHER MODIFICATIONS AND ACCESSORIES.

7. SPECIAL APPLICATION HOISTS: Contact your nearest *Wright* representative.

8. FOR CURVED TRACK APPLICATION, CONTACT FACTORY.

9. ACCO RESERVES THE RIGHT TO MAKE CHANGES TO THIS CATALOG AS MAY BE DEEMED NECESSARY.

*To complete Model Number insert L, P, G or M in place of asterisk.

All dimensions shown in inches unless otherwise specified. Dimensions which change with beam size are for minimum beam shown.

Work-Rated trolleys are adjustable for Standard I beam or WF beam, 4 inch to 11 inch flange width. Beam size must be specified. Trolleys are also available for 3.25 or 3.33" patented track beams. See **Accessories Section** for applications with flange width exceeding 11 inches.

All reference to beam flange widths are for clearance purposes only and do not imply that lower flange of beam will support hoist with load.

TROLLEY DATA: SPEED 50 FPM 100 FPM

*To complete Model Number insert L, P, G or M in place of asterisk.

All dimensions shown in inches unless otherwise specified. Dimensions which change with beam size are for minimum beam shown.

Work-Rated trolleys are adjustable for Standard I beam or WF beam, 4 inch to 11 inch flange width. Beam size must be specified. Trolleys are also available for 3.25 or 3.33" patented track beams. See **Accessories Section** for applications with flange width exceeding 11 inches.

All reference to beam flange widths are for clearance purposes only and do not imply that lower flange of beam will support hoist with load.

*To complete Model Number insert L, P, G or M in place of asterisk.

All dimensions shown in inches unless otherwise specified. Dimensions which change with beam size are for minimum beam shown.

Work-Rated trolleys are adjustable for Standard I beam or WF beam, 4 inch to 11 inch flange width. Beam size must be specified. Trolleys are also available for 3.25 or 3.33" patented track beams. See **Accessories Section** for applications with flange width exceeding 11 inches.

All reference to beam flange widths are for clearance purposes only and do not imply that lower flange of beam will support hoist with load.

TROLLEY DATA: SPEED 50 FPM 100 FPM

*To complete Model Number insert L, P, G or M in place of asterisk.

All dimensions shown in inches unless otherwise specified. Dimensions which change with beam size are for minimum beam shown.

Work-Rated trolleys are adjustable for Standard I beam or WF beam, 4 inch to 11 inch flange width. Beam size must be specified. Trolleys are also available for 3.25 or 3.33" patented track beams. See **Accessories Section** for applications with flange width exceeding 11 inches.

All reference to beam flange widths are for clearance purposes only and do not imply that lower flange of beam will support hoist with load.

Monorail Hoist CLOSE HEADROOM CROSS MOUNTED

1 TO 10 TON

THE NEW CENTURY SERIES®

Electric Wire Rope Hoists

Issued 06-01-12

Features & Benefits

Wright family of *Work-Rated* hoists is a complete line of electric wire rope hoists. It is an advanced design incorporating the most recent materials and concept. The most current duty cycle and safety requirements of users are built into this line, not added on.

CONSTRUCTION FEATURES:

CONTROLS: Choose from single, 2-speed, or inverter. Controls are magnetic reversing type, mechanically and electrically interlocked with 115 volt control circuit. All wiring conforms to applicable NEC requirements. Motor thermostats are standard providing motor running overcurrent protection. NEMA Type 3R enclosures are standard. Cover is lightweight, tough ABS material, deep-drawn for maximum control accessibility.

PUSH BUTTON STATION: Push button stations are not furnished as standard equipment with these hoists. Push button station drop of cord & strain chain are available as optional equipment. See Accessories Section. Specify required drop.

MOTOR: Standard NEMA C face mounting, TENV, Class F insulation, 30-minute duty motor is provided for standard commercial power supplies. The motor has a standard NEMA shaft extension.

GEAR TRAIN: Quiet, helical and spur gearing. All gears are machine cut, case-hardened alloy steel with shock-resistant ductile cores. Gearing is designed to AGMA standards for maximum life, and operates in an oil bath. Rugged aluminum alloy housing provides rapid heat dissipation.

BEARINGS - SPIDER RETAINERS: Precision heavy-duty ball bearings support all shafts. All bearings are either splash lubricated, or lifetime pre-lubricated and sealed. Bearings at outboard end of shafts are held in place by heavy-duty Spider Retainers. This allows removal of Gear Housing Cover for inspection (after draining oil). All internal parts remain in place and can be operated for inspection.

DRUM: The large diameter steel drum has machined grooves and large flanges. At least two full turns of rope remain on the drum at the lowest hook position of rated lift.

LOAD BLOCK - HOOK: Drop forged heat-treated steel hook swivels 360° on a shielded roller thrust bearing and comes equipped with a spring latch. Work can be performed on the load block without removing wire rope from drum. Sheaves are machined steel.

WIRE ROPE: Pre-formed wire rope, of hoisting service construction, made of extra improved plow steel (XIP) with an independent wire rope center. Has swaged fittings on both ends for ease of replacement if necessary.

MECHANICAL LOAD BRAKE: Automatic Weston-type multiple disc brake can hold a full capacity load independent of motor brake. This brake assures that load does not accelerate while being lowered. No wear compensation adjustment is required.

MOTOR BRAKE: Proven in millions of hours of in-service operation, the original *Wright* rectified D-C magnet-actuated disc brake delivers rapid stops with virtually no hook drift. Rated a minimum of 150% of full load motor torque. Exclusive brake-sensing microswitch prevents motor from operating against engaged brake and when brake requires adjustment.

LIMIT SWITCH: A gravity-type upper hook travel limit switch is provided. The unit is equipped with an automatic momentary lowering circuit. An optional geared limit switch is also available.

OVERLOAD CUTOFF: Exclusive patented ACCO unit is standard on all *Work-Rated* hoists except single-line models. The overload limiting device shall be designed to permit operation of the hoist within its rated load and to limit the amount of overload that can be lifted by a properly maintained hoist, under normal operating conditions.

The overload limiting device may allow the lifting of an overload, but shall be designed to prevent the lifting of an overload of such magnitude that could cause damage to a hoist, trolley, or supports. This does not imply that any overload is to be intentionally applied to the hoist.

The overload limiting device is an emergency device and shall not be used to measure the maximum load to be lifted and shall not be used to sense the overload imposed by the constrained load.

TROLLEY FRAME: The trolley frame shall be built of steel and precision machined to assure proper alignment of trolley wheels and drives.

TROLLEY WHEELS: Trolley wheels shall have tread surfaces machined and hardened to 375-425 Brinell. Each wheel shall be supported on anti-friction bearings suitable to take radial and thrust loads. The wheels shall be lubricated at the factory with a sodium base grease. The trolley wheels have dual tread for operation on tapered or flat flange beams. Wheel treads shall be smooth, true and uniform within .010 inch tread diameter on all wheels.

TROLLEY DRIVE: The trolley drive shall be a right angle worm gear reducer fully enclosed with a steel worm and bronze worm wheel designed to AGMA standards. The final reduction gear reduction at trolley wheels will be spur gears and will be open. The trolley drive motor shall be TENV 30 minute duty with class F insulation and NEMA C face mounting. A spring set A.C. disc type brake is available as optional equipment.

TROLLEY CONTROLS: Choose from single, 2-speed, or inverter. Single and 2-speed controls are available with ACM solid state cushion start for smooth travel motion and excellent load control as optional equipment.

HOW TO SPECIFY A *Work-Rated* HOIST

1. DETERMINE THE CAPACITY, LIFTING SPEED AND LIFTING DISTANCE.

2. DETERMINE THE REEVING REQUIRED FOR YOUR APPLICATION. *Work-Rated* hoists may be reeved in various ways to gain desired mechanical advantages ... capacity, lifting distance, and lifting speeds.

3. SPECIFY PROPER MODEL NUMBER in regard to hoist. Capacity, lifting speed, mounting and hoist control found in the following pages.

4. SPECIFY MOTOR VOLTAGE: *Wright* standard motors are available in 200/230/460/575-3-60 power with Class F insulation, and are totally enclosed non-ventilated. Control is furnished as standard equipment. Additional motor and control accessories are found in the Accessories Section.

5. SPECIFY BEAM FLANGE WIDTH: *Work-Rated* trolleys are adjustable for Standard I beam or WF beam, 4 inch to 11 inch flange width. *Beam size must be specified.* Trolleys are also available for 3.25 or 3.33" patented track beams. Trolleys for WF beams with flange widths greater than 11 inches available. See Accessories. All reference to beam flange widths are for clearance purposes only and do not imply that lower flange of beam will support hoist with load.

6. SPECIFY OTHER MODIFICATIONS AND ACCESSORIES.

7. SPECIAL APPLICATION HOISTS: Contact your nearest *Wright* representative.

8. FOR CURVED TRACK APPLICATION, CONTACT FACTORY.

9. ACCO RESERVES THE RIGHT TO MAKE CHANGES TO THIS CATALOG AS MAY BE DEEMED NECESSARY.

ACCO Acco Material Handling Solutions 800-967-7333 www.accomhs.com

All dimensions shown in inches unless otherwise specified. Dimensions which change with beam size are for minimum beam shown. Speedway trolleys are adjustable for Standard I beam or WF beam, 4 inch to 11 inch flange width. Beam size must be specified. Trolleys are also available for 3.25 or 3.33" patented track beams. See **Accessories Section** for applications with flange width exceeding 11 inches. All reference to beam flange widths are for clearance purposes only and do not imply that lower flange of beam will support hoist with load.

TROLLEY DATA: Speed 50 FPM 100 FPM
HP 1/2 1/2

All two speed trolley motors are 1800/600 RPM
(a) Trolley Brake is available as optional equipment.
(b) Dimension to bottom of control box increases from 16-9/16" to 22-9/16" when trolley is furnished with ACM.

X3W10D036*15-4D0	36	15	55-5/8	10	15 / 5	58-1/4	10 / 3.33	45-5/8	5

All dimensions shown in inches unless otherwise specified. Dimensions which change with beam size are for minimum beam shown. Speedway trolleys are adjustable for Standard I beam or WF beam, 4 inch to 11 inch flange width. Beam size must be specified. Trolleys are also available for 3.25 or 3.33" patented track beams. See **Accessories Section** for applications with flange width exceeding 11 inches. All reference to beam flange widths are for clearance purposes only and do not imply that lower flange of beam will support hoist with load.

TROLLEY DATA:

Speed	50 FPM	100 FPM
HP	1/2	1

All two speed trolley motors are 1800/600 RPM
(a) Trolley Brake is available as optional equipment.
(b) Dimension to bottom of control box increases from 16-9/16" to 22-9/16" when trolley is furnished with ACM or hoist with two speed 10 horsepower-200 volt control.

THE NEW CENTURY SERIES®

Electric Wire Rope Hoists

Issued 06-01-12

Top Running Trolley Hoist Features & Benefits

1 TO 25 TON

Wright family of *Work-Rated* hoists is a complete line of electric wire rope hoists. It is an advanced design incorporating the most recent materials and concept. The most current duty cycle and safety requirements of users are built into this line, not added on.

CONSTRUCTION FEATURES:

CONTROLS: Choose from single, 2-speed, or inverter. Controls are magnetic reversing type, mechanically and electrically interlocked with 115 volt control circuit. All wiring conforms to applicable NEC requirements. Motor thermostats are standard providing motor running overcurrent protection. NEMA Type 3R enclosures are standard. Cover is lightweight, tough ABS material, deep-drawn for maximum control accessibility.

PUSH BUTTON STATION: Push button stations are not furnished as standard equipment with these hoists. Push button station drop of cord & strain chain are available as optional equipment. See Accessories Section. Specify required drop.

MOTOR: Standard NEMA C face mounting, TENV, Class F insulation, 30-minute duty motor is provided for standard commercial power supplies. The motor has a standard NEMA shaft extension.

GEAR TRAIN: Quiet, helical and spur gearing. All gears are machine cut, case-hardened alloy steel with shock-resistant ductile cores. Gearing is designed to AGMA standards for maximum life, and operates in an oil bath. Rugged aluminum alloy housing provides rapid heat dissipation.

BEARINGS - SPIDER RETAINERS: Precision heavy-duty ball bearings support all shafts. All bearings are either splash lubricated, or lifetime pre-lubricated and sealed. Bearings at outboard end of shafts are held in place by heavy-duty Spider Retainers. This allows removal of Gear Housing Cover for inspection (after draining oil). All internal parts remain in place and can be operated for inspection.

DRUM: The large diameter steel drum has machined grooves and large flanges. At least two full turns of rope remain on the drum at the lowest hook position of rated lift.

LOAD BLOCK - HOOK: Drop forged heat-treated steel hook swivels 360° on a shielded roller thrust bearing and comes equipped with a spring latch. Work can be performed on the load block without removing wire rope from drum. Sheaves are machined steel.

WIRE ROPE: Pre-formed wire rope, of hoisting service construction, made of extra improved plow steel (XIP) with an independent wire rope center. Has swaged fittings on both ends for ease of replacement if necessary.

MECHANICAL LOAD BRAKE: Automatic Weston-type multiple disc brake can hold a full capacity load independent of motor brake. This brake assures that load does not accelerate while being lowered. No wear compensation adjustment is required.

MOTOR BRAKE: Proven in millions of hours of in-service operation, the original *Wright* rectified D-C magnet-actuated disc brake delivers rapid stops with virtually no hook drift. Rated a minimum of 150% of full load motor torque. Exclusive brake-sensing microswitch prevents motor from operating against engaged brake and when brake requires adjustment.

LIMIT SWITCH: A gravity-type upper hook travel limit switch is provided. The unit is equipped with an automatic momentary lowering circuit. An optional geared limit switch is also available.

OVERLOAD CUTOFF: Exclusive patented ACCO unit is standard on all *Work-Rated* hoists except single-line models. The overload limiting device shall be designed to permit operation of the hoist within its rated load and to limit the amount of overload that can be lifted by a properly maintained hoist, under normal operating conditions.

The overload limiting device may allow the lifting of an overload, but shall be designed to prevent the lifting of an overload of such magnitude that could cause damage to a hoist, trolley, or supports. This does not imply that any overload is to be intentionally applied to the hoist.

The overload limiting device is an emergency device and shall not be used to measure the maximum load to be lifted and shall not be used to sense the overload imposed by the constrained load.

TROLLEY FRAME: The trolley frame shall be built of ductile structural shapes and welded into a stable assembly of sufficient strength to comply with general strength requirements and to provide proper wheel and bearing alignment for trolley wheels and drives during the life of the trolley hoist.

TROLLEY WHEELS: Trolley wheels shall have tread surfaces machined and hardened to 375-425 Brinell. Each wheel shall be supported on ball bearings suitable to take radial and thrust loads. The wheels shall be lubricated at the factory with a sodium base grease. Wheel treads shall be smooth, true and uniform within .010 inch tread diameter on all wheels.

TROLLEY DRIVE: The trolley drive motor shall be fully enclosed 30 minute duty cycle rated, and Class F insulation complying with NEMA performance specifications. The motor shall be integral with a fully enclosed oil splash lubricated gear reduction. The motor and the gear reduction shafts shall be supported by permanently lubricated precision ball or roller bearings. The drive shaft shall provide drive from the gear reducer to the wheel gear reduction. The wheels are driven through rotating axles. A spring set A.C. disc type brake is available as optional equipment.

TROLLEY GEARING: All gears shall be cut from solid blanks with 20 degree pressure angle involute shape for high strength and shall comply with AGMA specifications for load ratings. All gears operating at higher than 200 FPM pitch line speed shall be fully enclosed in oil tight housings and lubricated by splash principle.

TROLLEY CONTROLS: Choose from single, 2-speed, or inverter. Single and 2-speed control is available with ACM solid state cushion start for smooth travel motion and excellent load control as optional equipment.

800-967-7333 www.accomhs.com

THE NEW CENTURY SERIES®

Electric Wire Rope Hoists

Issued 06-01-12

HOW TO SPECIFY A *Work-Rated* TROLLEY HOIST

1. DETERMINE THE CAPACITY, LIFTING SPEED, AND LIFTING DISTANCE.

2. DETERMINE THE REEVING REQUIRED FOR YOUR APPLICATION. *Work-Rated* hoists may be reeved in various ways to gain desired mechanical advantages ... capacity, lifting distance, and lifting speeds.

	Single Reeved	Double Reeved
Reeving:	2 PS or 4 PS	2 PD or 4 PD
Minimum Headroom:	Fair	Good
Lateral Hook Travel:	Hook travels	None
Cost:	Lower	Higher

HEADROOM: Some applications require that the distance from the top of bridge rail to saddle of the hook be held to a minimum. This dimension will determine whether single reeved or double reeved model is required.

HOOK TRAVEL:

Some applications require that the load, when being lifted, not move right or left from hoist centerline. If this requirement is known, a true vertical lift hoist must be used. These are described as two part double (2 PD) or four part double (4 PD).

3. SPECIFY PROPER MODEL NUMBER in regard to hoist. Capacity, lifting speed, mounting and hoist control found in the following pages.

4. SPECIFY MOTOR VOLTAGE: ACCO standard motors are available in 200/230/460/575-3-60 power with Class F insulation, and are totally enclosed non-ventilated. Control is furnished as standard equipment. Additional motor and control accessories are found in the Accessories Section.

5. WHEEL GAGE: Top running trolley hoists are available in various wheel gages depending on lift of the hoist. The wheel gage (WG) of top running hoist determines rail spacing. Special wheel gages for existing crane applications are available upon request.

6. SPECIAL APPLICATION HOISTS: Contact your nearest *Wright* representative.

7. ACCO RESERVES THE RIGHT TO MAKE CHANGES TO THIS CATALOG AS MAY BE DEEMED NECESSARY.

Hoist reeving may be either single or double reeving. The rated load of the hoist is determined in part by the number of parts (lines) of rope. The hoist speed is determined by the rotational speed of the drum and the reeving of the hoist.

All dimensions shown in inches unless otherwise specified.

(a) Trolley brake is available as optional equipment. Add 5-1/8" to dimension F.

(b) Four rubber bumpers are available as optional equipment.

Rail gage (beam spacing of the crane) must match wheel gage of the top running trolley hoist based on lift and drum length.

All two speed motors are 1800/600 RPM.

THE NEW CENTURY SERIES®

Electric Wire Rope Hoists

Issued 06-01-12

Deck Mounted
Features & Benefits

1 TO 25 TON

Wright family of *Work-Rated* hoists is a complete line of electric wire rope hoists. It is an advanced design incorporating the most recent materials and concept. The most current duty cycle and safety requirements of users are built into this line, not added on.

CONSTRUCTION FEATURES:

The new style of deck mounted *Work-rated* hoist has been designed to allow for easy mounting of the hoist to a double beam trolley frame.

CONTROLS: Choose from single, 2-speed, or inverter. Controls are magnetic reversing type, mechanically and electrically interlocked with 115 volt control circuit. All wiring conforms to applicable NEC requirements. Motor thermostats are standard providing motor running overcurrent protection. NEMA Type 3R enclosures are standard. Cover is lightweight, tough ABS material, deep-drawn for maximum control accessibility. Controls are shipped loose for customer mounting.

PUSH BUTTON STATION: Push button stations are not furnished as standard equipment with these hoists. Push button station drop of cord & strain chain are available as optional equipment. See Accessories Section. Specify required drop.

MOTOR: Standard NEMA C face mounting, TENV, Class F insulation, 30-minute duty motor is provided for standard commercial power supplies. The motor has a standard NEMA shall extension.

GEAR TRAIN: Quiet, helical and spur gearing. All gears are machine cut, case-hardened alloy steel with shock-resistant ductile cores. Gearing is designed to AGMA standards for maximum life, and operates in an oil bath. Rugged aluminum alloy housing provides rapid heat dissipation.

BEARINGS - SPIDER RETAINERS: Precision heavy-duty ball bearings support all shafts. All bearings are either splash lubricated, or lifetime pre-lubricated and sealed. Bearings at outboard end of shafts are held in place by heavy-duty Spider Retainers. This allows removal of Gear Housing Cover for inspection (after draining oil). All internal parts remain in place and can be operated for inspection.

DRUM: The large diameter steel drum has machined grooves and large flanges. At least two full turns of rope remain on the drum at the lowest hook position of rated lift.

LOAD BLOCK - HOOK: Drop forged heat-treated steel hook swivels 360° on a shielded roller thrust bearing and comes equipped with a spring latch. Work can be performed on the load block without removing wire rope from drum. Sheaves are machined steel.

WIRE ROPE: Pre-formed wire rope, of hoisting service construction, made of extra improved plow steel (XIP) with an independent wire rope center. Has swaged fittings on both ends for ease of replacement if necessary.

MECHANICAL LOAD BRAKE: Automatic Weston-type multiple disc brake can hold a full capacity load independent of motor brake. This brake assures that load does not accelerate while being lowered. No wear compensation adjustment is required.

MOTOR BRAKE: Proven in millions of hours of in-service operation, the original *Wright* rectified D-C magnet-actuated disc brake delivers rapid stops with virtually no hook drift. Rated a minimum of 150% of full load motor torque. Exclusive brake-sensing microswitch prevents motor from operating against engaged brake and when brake requires adjustment.

LIMIT SWITCH: A gravity-type upper hook travel limit switch is provided. The unit is equipped with an automatic momentary lowering circuit. An optional geared limit switch is also available.

OVERLOAD CUTOFF: Exclusive patented ACCO unit is standard on all *Work-rated* hoists except single-line models. The overload limiting device shall be designed to permit operation of the hoist within its rated load and to limit the amount of overload that can be lifted by a properly maintained hoist, under normal operating conditions.

The overload limiting device may allow the lifting of an overload, but shall be designed to prevent the lifting of an overload of such magnitude that could cause damage to a hoist, trolley, or supports. This does not imply that any overload is to be intentionally applied to the hoist.

The overload limiting device is an emergency device and shall not be used to measure the maximum load to be lifted and shall not be used to sense the overload imposed by the constrained load.

HOW TO SPECIFY *Work-Rated* DECK MOUNTED HOISTS

1. DETERMINE PROPER MODEL NUMBER in regard to hoist capacity, lift, lifting speed, and hoist control found in the following pages. Deck mounted hoists are grouped by load capacity and shown in top corner of each page.

2. SPECIFY MOTOR VOLTAGE: *Wright* standard motors are available in 200/230/460/575-3-60 power with Class F insulation, and are totally enclosed non-ventilated. Control is furnished as standard equipment. Additional motor and control accessories are found in the Accessories Section.

3. DETERMINE ADDITIONAL MODIFICATIONS AND ACCESSORIES. The check list and descriptive data for these items are found in the Accessories Section.

4. ACCO RESERVES THE RIGHT TO MAKE CHANGES TO THIS CATALOG AS MAYBE DEEMED NECESSARY.

Features & Benefits

1 TO 25 TON

THE NEW CENTURY SERIES®

Electric Wire Rope Hoists

Issued 06-01-12

Another word is "part" which refers to the mechanical advantage gained by multiple reeving. For example, with 2 part single reeving (2 PS) the load is distributed over the two parts and the mechanical advantage doubles the capacity of one part reeving and reduces by one half the lifting or lowering speed of the hook.

Reeving changes hoist arrangement to the beam or track, minimum headroom distance, and lateral hook travel.

	Single Reeved	Double Reeved
Reeving:	2 PS or 4 PS	2 PD or 4 PD
Minimum Headroom:	Fair	Good
Lateral Hook Travel:	Hook travels	None
Cost:	Lower	Higher

HEADROOM: Some applications require that the distance from the bottom of beam to saddle of the hook be held to a minimum. This dimension will determine whether single reeved or double reeved model is required.

3. SPECIFY PROPER MODEL NUMBER in regard to hoist. Capacity, lifting speed, mounting and hoist control found in the following pages.

4. SPECIFY MOTOR VOLTAGE: *Wright* standard motors are available in 200/230/460/575-3-60 power with Class F insulation, and are totally enclosed non-ventilated. Control is furnished as standard equipment. Additional motor and control accessories are found in the Accessories Section.

5. SPECIFY OTHER MODIFICATIONS AND ACCESSORIES.

6. SPECIAL APPLICATION HOISTS: Contact your nearest *Wright* representative.

7. ACCO RESERVES THE RIGHT TO MAKE CHANGES TO THIS CATALOG AS MAY BE DEEMED NECESSARY.

HOOK TRAVEL:

Some applications require that the load, when being lifted, not move right or left from hoist centerline. If this requirement is known, a true vertical lift hoist must be used. These are described as two part double (2 PD) or four part double (4 PD).

WRIGHT®
Work-Rated®

THE NEW CENTURY SERIES®

Electric Wire Rope Hoists

Issued 06-01-12

Base Mounted Winch **1 TO 6¼ TON** Features & Benefits

Wright family of Work-Rated winches is a complete line of electric wire rope winches. It is an advanced design incorporating the most recent materials and concept. Current duty cycle and safety requirements of users are built into this line, not added on.

CONSTRUCTION FEATURES:

CONTROLS: Choose from single, 2-speed, or inverter. Controls are magnetic reversing type, mechanically and electrically interlocked with 115 volt control circuit. All wiring conforms to applicable NEC requirements. Motor thermostats are standard providing motor running overcurrent protection. NEMA Type 3R enclosures are standard. Cover is lightweight, tough ABS material, deep-drawn for maximum control accessibility. Controls are shipped loose for customer mounting.

MOTOR: Standard NEMA C face mounting, TENV, Class F insulation, 30-minute duty motor is provided for standard commercial power supplies. The motor has a standard NEMA shaft extension.

GEAR TRAIN: Quiet, helical and spur gearing. All gears are machine cut, case-hardened alloy steel with shock-resistant ductile cores. Gearing is designed to AGMA standards for maximum life, and operates in an oil bath. Rugged aluminum alloy housing provides rapid heat dissipation.

BEARINGS - SPIDER RETAINERS: Precision heavy-duty ball bearings support all shafts. All bearings are either splash lubricated, or lifetime pre-lubricated and sealed. Bearings at outboard end of shafts are held in place by heavy-duty Spider Retainers. This allows removal of Gear Housing Cover for inspection (after draining oil). All internal parts remain in place and can be operated for inspection.

DRUM: The large diameter steel drum has machined grooves and large flanges. At least two full turns of rope remain on the drum at rated drum winding capacity. Load capacity of each winch is rated at total line pull of the lead wire rope off the winch's drum. A single line winch has one lead of wire rope off the drum rated at full capacity. A double line winch has two leads of wire rope off the drum with a capacity of one half hoist rated capacity. Each line will have a capacity equal to one half the rated capacity of the winch.

MECHANICAL LOAD BRAKE: Automatic Weston-type multiple disc brake can hold a full capacity load independent of motor brake. This brake assures that load does not accelerate while being lowered. No wear compensation adjustments are required.

MOTOR BRAKE: Proven in millions of hours of in-service operation, the original Wright rectified D-C magnet-actuated disc brake delivers rapid stops with virtually no hook drift. Rated a minimum of 150% of full load motor torque. Exclusive brake-sensing microswitch prevents motor from operating against engaged brake and when brake requires adjustment.

OVERLOAD CUTOFF: Exclusive patented Wright unit is not available on winches.

HOW TO SPECIFY A Work-Rated WINCH

1. DETERMINE THE CAPACITY, NUMBER OF LINES, LIFTING SPEED, AND WIRE ROPE LEAD OFF POSITION FOR YOUR APPLICATION. Work-Rated winches may be reeved in various ways to gain desired mechanical advantages. The chart in paragraph 4 illustrates characteristics of each type of reeving.

Reeving may change capacity, lifting distances, lifting speeds, and cable size. Reeving terminology is either "single" or "double" which refers to the number of wire ropes coming from the drum.

Another word is "part" which refers to the mechanical advantage gained by multiple reeving. For example, with one part single reeving (1 PS), the load is supported by one part of a single rope. By reeving single rope into two parts (2 part single) the load is distributed over the two parts and the mechanical advantage doubles the capacity of one part reeving and reduces by one half the lifting or lowering speed of the hook.

2. SPECIFY PROPER MODEL NUMBER in regards to winch capacity, drum winding capacity, lifting speed and hoist control found in following pages. Winches are grouped by load capacity. All winches are one part single reeved (1 PS) in either single or double line models.

3. SPECIFY EITHER SINGLE LINE OR DOUBLE LINE MODEL.

4. SPECIFY DRUM REEVING ARRANGEMENTS.

SINGLE LINE REEVING ARRANGEMENTS

DOUBLE LINE REEVING ARRANGEMENTS

Standard Arrangement

CC Arrangement

DD Arrangement

EE Arrangement

Electric Wire Rope Hoists

Issued 06-01-12

Base Mounted Winch 1 TO 6¼ TON Features & Benefits

5. DETERMINE IF STANDARD LINE LEADOFF ANGLE IS APPROPRIATE. *Work-Rated* winches are designed with a standard range or ranges of leadoff angles. See the illustration below for location of the standard range.

If any of desired leadoff angle falls into non standard area, the factory must be consulted for fabrication and additional pricing factors. Specify the desired angle range viewed from the gearing end of winch. State angle in EXACT degree clockwise from zero vertical leadoff position as shown. If a range of degrees is required, state both limits in degrees.

* Angles vary with MODEL SERIES. See specific pages for standard angles.

6. SPECIFY THE WIRE ROPE. *Work-Rated* winches are not furnished with wire rope but are available with wire rope as optional equipment. Wire rope on all winches is 6 x 37 preformed. Certain applications may require non rotating cable, 18 x 7 construction. Prices for non rotating cable are available on application. Specify the wire rope by total length, diameter, and desired fittings.

7. SPECIFY CABLE FITTINGS. The drum end (live end) cable fitting is attached to wire rope when supplied from the factory. The cable fitting is designed for easy installation and is swaged on to provide maximum security. See Accessories Section for pricing.

The following "DEAD END" cable fittings are available on application:
• Eye Bolt • Turn Buckle • Threaded Rod • Swivel Hook

The "DEAD END" of wire rope may be specified "OPEN" (no fittings) or with any of the above fittings.

8. SPECIFY LOAD BLOCK AND IDLER SHEAVES. Information and data for these items are found in Accessories Section.

9. SPECIFY MOTOR VOLTAGE. *Wright* standard motors are available in 200/230/460/575-3-60 power with Class F insulation, and are totally enclosed non-ventilated.

10. CONTROL. Control is furnished as standard equipment. Additional motor and control accessories and modifications are found in Accessories Section. Control is shipped loose for customer mounting. If control mounting by ACCO is desired, contact factory for pricing. Contact factory for control dimensions and locations.

11. SPECIFY PUSH BUTTON STATION. Push button station, drop of cord and strain chain are available as optional equipment. Specify drop of push button, calculated from center line of a winch to center line of the push button. See Accessories Section.

12. SPECIFY LIMIT SWITCHES. *Work-Rated* winches are not furnished with a standard limit switch or an overload cutoff device. Geared limit switch is available as optional equipment. A separate gravity limit switch to be actuated by the bottom block or load hook assembly is recommended. Slack line limit switch is available on application.

13. ACCO RESERVES THE RIGHT TO MAKE CHANGES TO THIS CATALOG AS MAY BE DEEMED NECESSARY.
